**Subject:** URGENT: Create Firewall Rule to Mitigate malware attack

---

**Body:**

Hello Networks Team,

We would like to request the creation of a firewall rule and provide you more information about the ongoing malware attack.

Attack information:

An attacker was able to compromise the Spring Framework on our nbn services using zero-day vulnerability (Spring4Shell).

Firewall rule parameters:

- Block incoming traffic on client request path “/tomcatwar.jsp”
- Block incoming traffic with HTTP headers: {  
    "suffix": "%>/",  
    "c1": "Runtime",  
    "c2": "<%",  
    "DNT": "1",  
    "Content-Type": "application/x-www-form-urlencoded"  
}

For any questions or issues, don't hesitate to reach out to us.

Kind regards,  
Telstra Security Operations
